

August 21, 2026

GDP growth continues to outpace health spending growth, but they have begun to converge in June 2026

HIGHLIGHTS

- ▲ In June 2026, national health spending grew by 5.8% year over year, down from the May 2026 growth rate of 6.1% and significantly lower than its June 2025 rate of 7.1%.
- ▲ GDP grew by 6.1% in June, year over year, lower than its revised May value of 6.8%. As a result, national health spending in June equaled the 18.3% of GDP seen in May. National health spending was last below 18% of GDP in July 2024.
- ▲ Year-over-year growth in personal health care spending was 5.5% in June, year over year, down from 7.5% in June 2025.
- ▲ Growth among major spending categories was highest for dental services, at 8.2%, year over year, while spending for prescription drugs grew the slowest, at 1.9%. Drug spending growth has slowed significantly this year; it stood at 8.6% in June 2025.

National Health Spending and GDP*

	June 2024	June 2025	May 2026	June 2026
GDP	29.24	30.73	32.42	32.59

Note: Any discrepancies in differences are due to rounding.

* Spending is in trillions of dollars at a seasonally adjusted annual rate (SAAR).

Altarum is a nonprofit research and consulting organization that creates and implements solutions to advance health among at-risk and disenfranchised populations. Since 2011, Altarum has researched cost growth trends and key drivers of U.S. health spending and formulated policy strategies to help bend the cost growth curve.

The Health Sector Economic IndicatorsSM reports are a monthly publication of Altarum and provide an analysis of health spending, employment, and prices. The reports were published through March 2025; starting in July 2026, Altarum has relaunched publication of the series. For more information, contact George Miller at george.miller@altarum.org. George Miller, PhD (principal author) and Matt Daly, PhD, contributed to this brief. Media Contact: press@altarum.org. For more information, visit <http://altarum.org/solution/health-sector-spending>.

DISCUSSION

In June 2026, national health spending reached a seasonally adjusted annual rate of \$5.95 trillion, up from the revised May level of \$5.92 trillion. June's spending corresponds to a year-over-year growth rate of 5.8%.

Year-over-year GDP growth was 6.1% in June, and national health spending in June grew 0.2 percentage points slower than GDP. National health spending in June represented 18.3% of GDP. In the past few months, an increasing growth rate in GDP and a decline in the growth rate of health spending resulted in GDP growth exceeding health spending growth beginning in March 2026 for the first time in more than two years. However, those rates began to converge in June.

The year-over-year growth rate in personal health care spending was 5.5% in June and also fell below the GDP growth rate beginning in March. (See Exhibit 1.)

Exhibit 1. Year-over-Year Growth in GDP and Health Spending

Exhibit 2 illustrates how health spending in June was distributed among spending categories. Personal health care constituted 85.5% of national health spending. Slightly more than half of total expenditures was attributed to hospital care and physician and clinical services.

Exhibit 2. Health Spending by Category, June 2026

Exhibit 3 displays the growth in spending for personal health care and its major component categories for the 12-month periods ending June 2026 and June 2025. Spending on all categories except dental services showed slower growth this year compared with last. Annual growth in June 2026 was greatest for dental services, at 8.2%. The slowest growth occurred in spending on prescription drugs, at 1.9%.

Exhibit 3. Health Care Spending 12-Month Growth

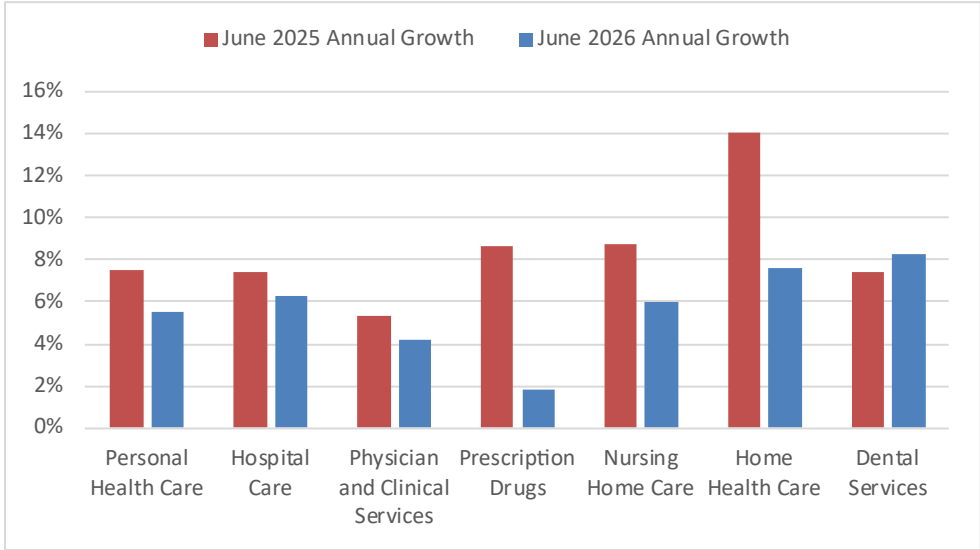

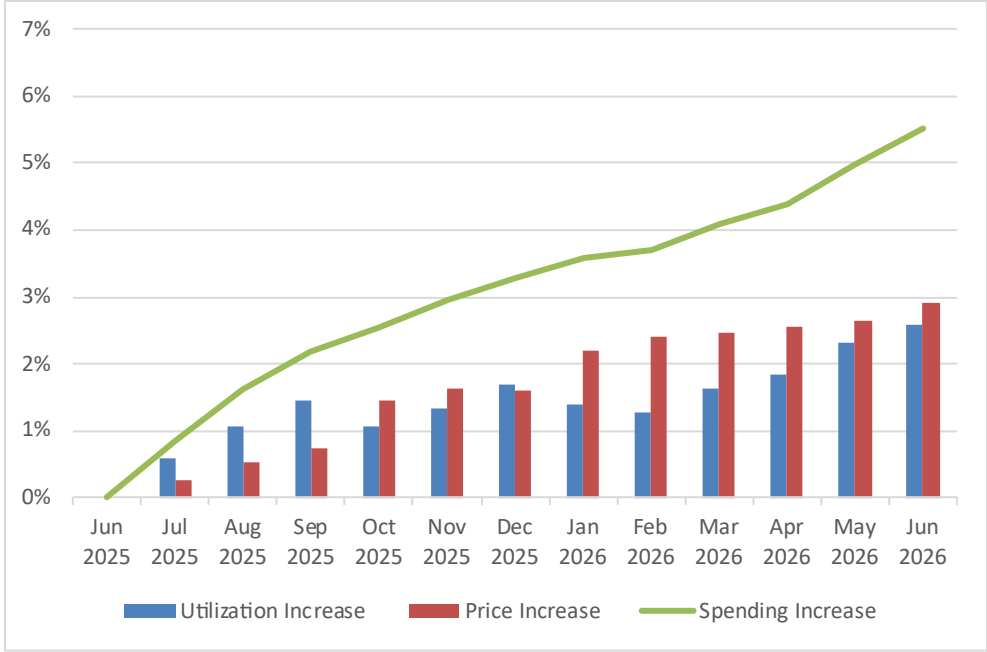

Exhibit 4 shows how spending on personal health care has grown over the past year (beginning in June 2025) and illustrates the relative contribution of utilization and prices to this growth. It indicates that price increases have contributed slightly more than utilization growth through June 2026, with price increases dominating utilization growth since the start of the calendar year. Of the 5.5% growth in personal health care spending during this period, 2.9 percentage points can be attributed to price growth, while the remaining 2.6 percentage point growth was associated with increases in utilization.

Exhibit 4. Cumulative Growth in Personal Health Care Spending

TIME SERIES TRACKER

Exhibit 7. Year-over-Year Percentage Change in Spending and GDP

Source: Altarum monthly national health spending estimates. The monthly GDP is from S&P Global Market Intelligence.

Note: Lightly shaded bars denote recession periods.

Exhibit 8 Monthly Health Spending as a Percentage of Monthly GDP

Source: Altarum monthly national health spending estimates. Monthly GDP is from S&P Global Market Intelligence. PGDP is from the U.S. Congressional Budget Office and has been converted to monthly estimates. **Note:** Lightly shaded bars denote recession periods.

Methods. Altarum's estimates are based on [BEA monthly health spending](#) and [CMS annual NHE estimates \(1990–2024\) and projections \(2025–2026\)](#). BEA spending categories are matched to NHEA components by using information presented in the [following](#): Hartman, M. B., Kornfeld, R. J., & Catlin, A. C. (2010, September). A reconciliation of health care expenditures in the National Health Expenditures Accounts and in gross domestic product. *Survey of Current Business*, 90(9), 42–52. For all NHEA personal health care categories except “other health, residential, and personal care,” monthly estimates are based on BEA spending adjusted to NHEA by using annual ratios. For the remaining categories, national health spending estimates and projections are allocated across months by using a simple trend. Annual ratio adjustments through 2024 are based on NHEA actuals and ensure that monthly estimates sum exactly to NHEA annual amounts. The 2024 ratios are used to adjust BEA spending for months in 2025 and 2026.

Health Sector Economic IndicatorsSM

Insights from Monthly National Price Indices through July 2026

PRICE BRIEF

August 21, 2026

Growth in economy-wide inflation outpaces health care prices for ninth consecutive month

HIGHLIGHTS

- ▲ In July 2026, the overall Health Care Price Index (HCPI) stood at 2.6%, down from its June value of 2.9%.
- ▲ Economy-wide inflation declined in July, with year-over-year change in the overall Consumer Price Index (CPI) decreasing by 0.1% from June's value of 3.5% to 3.4%; the Producer Price Index (PPI) decreased by 0.8% to 4.7%.
- ▲ Among the major health care categories, prices for dental care in July were the fastest-growing at 5.1% year over year. This is an increase from a growth of 4.8% in July of 2025. At the other extreme, prescription drug prices fell by 3.1%—their seventh straight month of lower year-over-year prices.
- ▲ For major payers, year-over-year Medicare prices growth for services (3.3%) exceeded private insurance (2.8%) and Medicaid (1.7%).
- ▲ The implicit measure of health care utilization growth was 2.6% year over year in June, down from the May value of 3.1% (July data are not yet available).
- ▲ Among major spending categories, home health care utilization increased the fastest, at 5.6%, followed by prescription drugs at 4.3%. Utilization of dental services grew the slowest, at 1.2%.

	July 2024	July 2025	June 2026	July 2026
Health Care Price Index (HCPI)	2.9%	2.8%	2.9%	2.6%
GDP Deflator (GDPD)	2.6%	2.8%	4.2%	**
HCPI - GDPD	0.4%	0.0%	-1.3%	**
Addendum				
Personal health care spending	8.6%	7.5%	5.5%	**
Health care utilization	5.7%	4.7%	2.6%	**
Medical Consumer Price Index (MCPI)	3.2%	3.5%	2.0%	1.7%
Consumer Price Index, all items (CPI)	2.9%	2.7%	3.5%	3.4%
Producer Price Index, Final Demand (PPI)	2.4%	3.2%	5.5%	4.7%

Source: Altarum analysis of U.S. Bureau of Labor Statistics (BLS) data. HCPI is a composite price index designed to measure overall price changes for personal health care spending and is patterned after the price index developed by the Centers for Medicare & Medicaid Services (CMS). Details are provided below. Numbers may not subtract properly due to rounding. **Data not available

Altarum is a nonprofit research and consulting organization that creates and implements solutions to advance health among at-risk and disenfranchised populations. Since 2011, Altarum has researched cost growth trends and key drivers of U.S. health spending and formulated policy strategies to help bend the cost growth curve.

The *Health Sector Economic IndicatorsSM* (HSEI) reports are a monthly publication of Altarum providing analyses of health spending, employment, and prices. DISCUSSION

In July 2026, the overall health care price index (HCPI) stood at 2.6% year-over-year, below its June value of 2.9%, and has gradually fallen from a recent high of 3.4% in November 2025 (Exhibit 1). The June HCPI was 1.3 percentage points below economy-wide inflation as measured by the GDP deflator, and has been below economy-wide inflation since November 2025. (July GDP data are not yet available.)

Regarding other measures of economy-wide inflation, the CPI declined by 0.1% to 3.5% year over year in July, while the PPI fell from 5.5% to 4.7%. Economy-wide price increases were driven largely by commodities inflation, which deropped to 3.7% year over year from a June value of 4.0%, and services inflation, which fell slightly to 3.1% (Exhibit 4).

Dental services exhibited the fastest rise in prices in July, growing by 5.1%, year over year. The growth rate for dental services in May and June were 8.5% and 7.0%, respectively, explaining the large growth in spending on dental services documented in this month’s spending brief. Prescription drugs fell by 3.1% in July, continuing a negative trend that began in January of this year. All other major categories increased between 1.1% (for physician services) and 3.6% (for nursing home care) (Exhibits 2 and 3).

Among major payers for health care services, prices rose fastest for Medicare patients in July, at 3.3% year over year, following a gradual increase from a negative rate of 0.6% in September 2022 (Exhibit 6). Price growth was 1.7% for Medicaid patients, dropping from a peak of 6.8% in May 2024. Price growth for private insurance patients was 2.8%. Among specific health sector components, the faster price growth among Medicare patients was driven by growth in hospital care prices, up 4.2% year over year. Hospital prices for private insurance grew by 3.9%, while Medicaid was up by 0.9% (Exhibit 8). Growth in prices for physician services was moderate for all three payers, all below 2.0% (Exhibit 7).

Exhibit 2. Year-over-Year Price Growth for Selected Categories

Exhibit 1. Year-over-Year Growth in HCPI & GDPD

Source: Altarum analysis of monthly BLS price data.

Our implicit measure of overall health care utilization growth (total spending growth net of health care price inflation) was 2.6% in June 2026 (Exhibit 9). (July data are not yet available.) Among major categories, the fastest-growing utilization component was home health care, up 5.6% year over year, followed by prescription drugs at 4.3%. Utilization of dental services grew the slowest, at 1.2%.

Exhibit 3. Annualized % Change in Prices for Major Components of National Health Expenditures

Exhibit 4. Year-over-Year Percentage Change in Health Prices Compared with Economy-wide Commodities vs. Economy-wide Services

Methods. Altarum's estimates for the monthly HCPI, a price index for personal health care spending within the National Health Expenditure Accounts, are essentially monthly versions of the annual index developed by the CMS National Health Statistics Group (NHS). The advantages of this measure over the medical care component of the CPI are well documented. Information on the CMS index is presented in the following source: U.S. Department of Health and Human Services. (2019). *National Health Expenditure Accounts: Methodology Paper, 2018—Definitions, Sources, and Methods*. Washington, DC: Centers for Medicare & Medicaid Services. Retrieved from <http://www.cms.gov/files/document/definitions-sources-and-methods.pdf>. The HCPI is calculated by using BLS data on PPIs for hospital, physician, nursing home, and home health components and CPIs for prescription drugs and other remaining items. Following NHS, we use the GDPD rather than the CPI as our measure of economy-wide inflation. While this brief focuses on prices, it also incorporates data from our spending brief and shows the power of looking at prices and spending together. In particular, it reveals the striking role of utilization in health spending growth trends.

Exhibit 9. Implicit Health Care Utilization Growth by Major Components of NHE, Year-over-year

	June 2026	3-Month Moving Average	12-Month Moving Average
Total personal health care	2.6%	2.9%	3.8%
Hospital care	2.9%	3.0%	3.7%
Physician and clinical services	2.9%	3.0%	3.8%
Prescription drugs	4.3%	4.7%	5.2%
Nursing home care	2.7%	2.8%	4.1%
Dental Services	1.2%	1.7%	3.6%
Home health care	5.6%	5.7%	8.6%
Other professional services	-1.6%	1.5%	5.9%
Other personal health care	0.5%	1.1%	1.3%
Other nondurable medical products	7.8%	8.1%	6.4%
Durable medical equipment	4.7%	3.8%	2.4%

Source: Altarum analysis of monthly BLS data combined with Altarum HSEI spending data. Utilization growth (U) is computed as spending growth (S) net of price growth (P): $U = S - P$. This approach is an approximation, ignoring the interaction term between spending and prices growth ($S \cdot P$); however, as long as the two growth rates are small, this term is insignificant.

Source: Altarum analyses of BLS price data.

August 21, 2026

Health care job growth bolsters sagging labor market

HIGHLIGHTS

- ▲ In July 2026, health care industry employment increased by 22,000 jobs while non-health care industries lost 45,000 jobs.
- ▲ By major subsector, July's health care job growth was led by ambulatory health care services which added 18,100 jobs, followed by nursing and residential facilities which added 4,300. Hospitals lost 400 jobs.
- ▲ For health care and social assistance, the jobs opening rate was 5.3% and the hiring rate was 2.9% in June. The total separations rate was 2.8%.
- ▲ The overall unemployment rate was 4.1% in July, down 0.1% from the previous month.
- ▲ Nominal health care wage growth in June 2026 was 2.2% year over year, with growth rates of 1.8% in hospitals, 2.2% in ambulatory health care services, and 2.9% in nursing and residential care facilities.

Cyclical Employment Big Picture

Seasonally Adjusted	Feb 2020	Jul 2025	Jun 2026	Jul 2026
Total Employment (000)	152,293	158,542	158,881	158,858
Non-Health Employment (000)	135,818	140,415	140,385	140,340
Health Employment (000)	16,475	18,127	18,497	18,519
Health Share of Total Employment	10.82%	11.43%	11.64%	11.66%
Unemployment Rate	3.5%	4.3%	4.2%	4.1%

Source: Altarum analysis of Bureau of Labor Statistics (BLS) data. Health care employment is private only.

DISCUSSION

In July 2026, the health care industry added 22,000 new jobs, as shown in Exhibit 1. This figure is lower than the monthly average of 36,000 jobs added in the previous twelve months and has declined from over 80,000 new jobs in March 2026. Conversely, non-health-care industries lost 45,000 jobs. Over the past twelve months, health care job growth has been much more uniformly positive (with one instance of negative month-over-month growth seen in February 2026) compared to non-health-care job growth (with seven negative months).

In July, ambulatory health care services added 18,100 jobs, which is 10% lower than the monthly average of 20,100 for the past year. Growth of major categories in this subsector was led by home health care services at 4,600 jobs. Offices of physicians gained 4,200 jobs for the month, while dental offices lost 900. The remaining growth occurred among other categories of this subsector (see Exhibit 9). Nursing and residential care facilities added 4,300 jobs, 32% lower than the monthly average of 6,300 jobs added in the past year. Within this subsector, nursing care facilities gained 3,200 jobs, which was 2% below the prior 12-month average, while other nursing and residential care homes added 1,100 positions, 64% lower than the previous 12-month average. Finally, hospitals recorded a loss of 400 jobs, down 104% from subsector’s 12-month average of a gain of 10,200.

Exhibit 1. Month-Over-Month Change in Health Care Employment, Seasonally Adjusted

Source: Altarum analysis of monthly BLS Current Employment Statistics data.

Since February 2020, before the COVID-19 recession began, health care employment has grown by 2,043,500 jobs, or 12.4%—more than triple the 3.3% increase in non-health care employment over the same period (see Exhibit 2). The health care industry started growing especially quickly in February 2022 and has mostly maintained its pace since then, while employment growth in non-health care industries has been largely stagnant for nearly three years. As of July 2026, the health care industry has outpaced non-health care industries for 44 consecutive months.

Since February 2020, employment in ambulatory health care services has increased by 1,383,500 jobs, or 17.6%, while hospital employment has grown by 536,900 jobs, or 10.3% (see Exhibit 3). Employment in nursing and residential remained below pre-pandemic levels until January 2025 but is now up 123,100 jobs (3.6%) over the February 2020 baseline. (As described in an Altarum [analysis](#), this contraction in employment was likely due to skilled nursing facility closures, lower resident censuses, and staffing shortages. All three health care subsectors have steadily increased since February 2022.)

Exhibit 2. Change in Health and Non-Health Employment Compared to February 2020

Source: Altarum analysis of monthly BLS Current Employment Statistics data.

Exhibit 3. Change in Health Employment Compared to February 2020 by Major Setting of Care

Source: Altarum analysis of monthly BLS Current Employment Statistics data.

In June 2026, the job openings rate in health care and social assistance fell 0.6 percentage points to 5.3% from the revised 5.9% May value, as shown in Exhibit 4. The hiring rate increased from 2.6% to 2.9%. The total separations rose slightly to 2.8% in June, as shown in Exhibit 5.

Exhibit 4. Monthly Rates of Hires and Job Openings in the Health Care and Social Assistance and All Other Industries

Source: Altarum analysis of monthly BLS Job Openings and Labor Turnover Survey.

Notes: The job opening rate is the number of job openings on the last business day of the month as a percent of employment plus job openings, while the hire rate is the number of hires during the entire month as a percent of employment. Health care jobs typically constitute 80% of all jobs in the health care and social assistance sector. Most social assistance jobs are in services for the elderly and persons with disabilities and childcare services.

Exhibit 5. Monthly Separation Rates by Type in the Health Care and Social Assistance and All Other Industries

Source: Altarum analysis of monthly BLS Job Openings and Labor Turnover Survey.

Notes: Separation rates are the number of separations during the entire month as a percent of employment. Health care jobs typically constitute 80% of all jobs in the health care and social assistance sector. Most social assistance jobs are in services for the elderly and persons with disabilities and childcare services.

Year-over-year wage growth in the health care sector was 2.2% in June 2026, as shown in Exhibit 6. However, after adjusting for inflation, year-over-year health care wage growth was negative, at -1.3%. Nominal wage growth was fastest in nursing and residential care facilities at 2.9%, followed by ambulatory health care services at 2.3% and hospitals at 1.8% (see Exhibit 7). Inflation-adjusted wages, however, fell by 0.5% in nursing and residential care facilities, 1.6% in hospitals, and 1.3% in ambulatory health care services. Meanwhile, non-health-care wage growth was 3.6% in June 2026, or 0.1% after adjusting for inflation.
