Health Sector Economic Indicators℠

Insights from Monthly National Price Indices through October 2026 PRICE BRIEF

November 20, 2026

Personal health care prices continue to moderate

HIGHLIGHTS

- In October 2026, the overall Health Care Price Index (HCPI) stood at 1.8%, down from 2.1% in September and from a recent peak of 3.2% in November 2025.
- Economy-wide inflation in October, as represented in the year-over-year change in the overall Consumer Price Index (CPI), equaled 4.0%, while the Producer Price Index (PPI) increased to 6.5%.
- Among the major health care categories, prices for dental care in October were the fastest growing at 6.6% year over year. This is an increase from a growth of 3.3% in October of 2025. At the other extreme, prescription drug prices fell by 4.2%—their tenth straight month of lower year-over-year prices.
- For major payers in October, year-over-year private insurance prices growth for services (3.1%) exceeded Medicare, which fell to 2.0% from a September value of 3.5%, and Medicaid (1.7%).
- The implicit measure of health care utilization growth was 4.0% year over year in September, up slightly from its August value of 3.9% (October data are not yet available).
- Among major spending categories, utilization of prescription drugs increased the fastest, at 6.1%. Utilization of dental services declined by 1.8%.

	October 2024	October 2025	September 2026	October 2026
Health Care Price Index (HCPI)	3.1%	3.1%	2.1%	1.8%
GDP Deflator (GDPD)	2.4%	2.9%	3.8%	3.8%
HCPI - GDPD	0.7%	0.2%	-1.7%	-2.0%
Addendum				
Personal health care spending	8.2%	7.5%	6.1%	**
Health care utilization	5.1%	4.3%	4.0%	**
Medical Consumer Price Index (MCPI)	3.3%	3.0%	1.5%	1.8%
Consumer Price Index, all items (CPI)	2.6%	2.8%	3.7%	4.0%
Producer Price Index, Final Demand (PPI)	2.8%	2.8%	6.3%	6.5%

Source: Altarum analysis of U.S. Bureau of Labor Statistics (BLS) data. HCPI is a composite price index designed to measure overall price changes for personal health care spending and is patterned after the price index developed by the Centers for Medicare & Medicaid Services (CMS). Details are provided below. Numbers may not subtract properly due to rounding. **Data not available

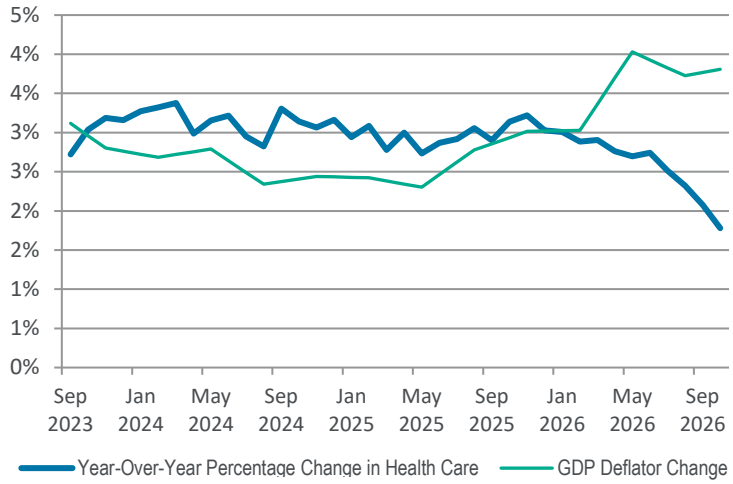

Altarum is a nonprofit research and consulting organization that creates and implements solutions to advance health among at-risk and disenfranchised populations. Since 2011, Altarum has researched cost growth trends and key drivers of U.S. health spending and formulated policy strategies to help bend the cost growth curve.

The Health Sector Economic Indicators℠ (HSEI) reports are a monthly publication of Altarum providing analyses of health spending, employment, and prices. DISCUSSION

In October 2026, the overall health care price index (HCPI) stood at 1.8% year over year, down from its September value of 2.1%, and has fallen from a recent high of 3.2% in November 2025 (Exhibit 1). The October HCPI was 2.0 percentage points below economy-wide inflation as measured by the GDP deflator.

Exhibit 1. Year-over-Year Growth in HCPI & GDPD

Source: Altarum analysis of monthly BLS price data.

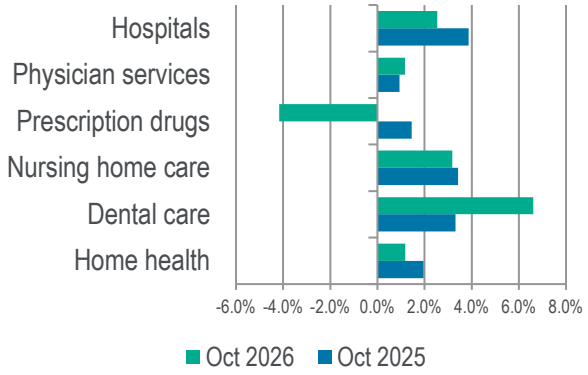

Regarding other measures of economy-wide inflation, the CPI increased from 3.7% in September to 4.0% in October, while the PPI grew by 6.5%, up from 6.3% in September. Economy-wide price increases were driven largely by commodities inflation, which increased to 4.9% year over year from a September value of 4.6%, and services inflation, which grew from 3.3% in September to 3.5% in October (Exhibit 4).

Among major spending categories, dental services exhibited the fastest rise in prices in October, growing by 6.6%, year over year. Prices in most other major categories increased between 1.2% for physician services and home health care and 3.2% for nursing home care. Hospital prices grew by 2.5% (Exhibits 2 and 3).

However, prices for prescription drugs fell by 4.2% in October, continuing a negative trend that began in January of this year. In September, prescription drug prices fell by a record 4.5%, explaining the slow growth in September drug spending documented in this month's spending brief. Both market changes (such as increased competition from generic drugs and biosimilars) and new policies (such as the Medicare drug pricing negotiation program) have contributed to the decline in drug prices.

Among major payers for health care services, prices rose fastest for private insurance patients in October, at 3.1% year over year, while Medicare prices fell to 2.0% from 3.5% in September (Exhibit 6). Price growth was 1.7% for Medicaid patients, dropping from a peak of 6.8% in May 2024. Among specific health sector components, the price growth among private insurance patients was driven by growth in hospital care prices, up 3.8% year over year. Growth in hospital prices for Medicare fell to 2.2%, while Medicaid prices were up by 0.9% (Exhibit 8). Growth in prices for physician services was moderate for all three payers, all below 2.0%, with Medicare prices at 1.8%, private insurance at 1.3%, and Medicaid prices at 0.3% (Exhibit 7).

Exhibit 2. Year-over-Year Price Growth for Selected Categories

Our implicit measure of overall health care utilization growth (total spending growth net of health care price inflation, year over year) was 4.0% in September 2026 (Exhibit 9). (October data are not yet available.) Among major categories, the fastest-growing utilization component was prescription drugs, which increased by 6.1%, followed by home health care, up 5.5% year over year. At the other extreme, utilization of dental services declined by 1.8%.

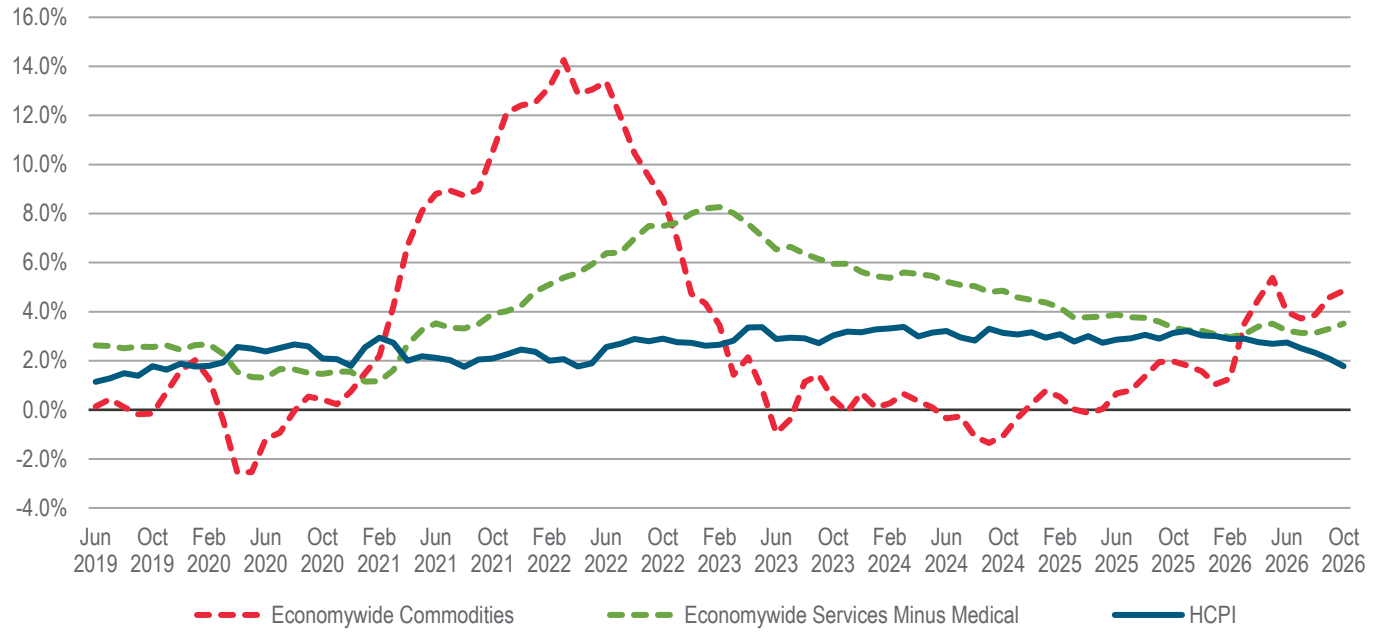

PRICE GROWTH BY DETAILED CATEGORIES

Exhibit 3. Annualized % Change in Prices for Major Components of National Health Expenditures

	Ending October 2024	Ending October 2025	Ending October 2026
Health Care Price index	3.1%	3.1%	1.8%
Hospital Care	3.2%	3.9%	2.5%
Physician and clinical services	2.4%	0.9%	1.2%
Prescription drugs	1.6%	1.4%	-4.2%
Nursing home care	3.0%	3.4%	3.2%
Dental services	3.8%	3.3%	6.6%
Home health care	3.0%	2.0%	1.2%
Other professional services	1.5%	3.4%	3.3%
Other personal health care	9.0%	7.1%	3.4%
Other non-durable medical products	-0.5%	-0.5%	-0.4%
Durable medical equipment	2.8%	2.2%	0.2%

Methods. Altarum's estimates for the monthly HCPI, a price index for personal health care spending within the National Health Expenditure Accounts, are essentially monthly versions of the annual index developed by the CMS National Health Statistics Group (NHSG). The advantages of this measure over the medical care component of the CPI are well documented. Information on the CMS index is presented in the following source: U.S. Department of Health and Human Services. (2019). *National Health Expenditure Accounts: Methodology Paper, 2018—Definitions, Sources, and Methods*. Washington, DC: Centers for Medicare & Medicaid Services. Retrieved from http://www.cms.gov/files/document/definitions-sources-and-methods.pdf. The HCPI is calculated by using BLS data on PPIs for hospital, physician, nursing home, and home health components and CPIs for prescription drugs and other remaining items. Following NHSG, we use the GDPD rather than the CPI as our measure of economy-wide inflation. While this brief focuses on prices, it also incorporates data from our spending brief and shows the power of looking at prices and spending together. In particular, it reveals the striking role of utilization in health spending growth trends.

Exhibit 9. Implicit Health Care Utilization Growth by Major Components of NHE, Year-over-year

	September 2026	3-Month Moving Average	12-Month Moving Average
Total personal health care	4.0%	3.9%	3.9%
Hospital care	4.4%	4.7%	4.2%
Physician and clinical services	3.9%	4.2%	4.6%
Prescription drugs	6.1%	5.2%	4.9%
Nursing home care	3.1%	2.7%	3.1%
Dental Services	-1.8%	-1.5%	1.6%
Home health care	5.5%	6.0%	8.7%
Other professional services	3.3%	3.6%	3.6%
Other personal health care	3.6%	2.0%	1.4%
Other nondurable medical products	6.5%	6.8%	5.9%
Durable medical equipment	6.9%	6.7%	3.4%

Source: Altarum analysis of monthly BLS data combined with Altarum HSEI spending data. Utilization growth (U) is computed as spending growth (S) net of price growth (P): U = S – P. This approach is an approximation, ignoring the interaction term between spending and prices growth (S*P); however, if the two growth rates are small, this term is insignificant.
