

October 22, 2026

Prescription drug prices decline at a record rate

HIGHLIGHTS

- ▲ In September 2026, the overall Health Care Price Index (HCPI) stood at 2.1%, down from 2.3% in August and from a recent peak of 3.2% in November 2025.
- ▲ Economy-wide inflation in September, as represented in the year-over-year change in the overall Consumer Price Index (CPI), equaled 3.7%, while the Producer Price Index (PPI) increased by 0.7 percentage points to 6.3%.
- ▲ Among the major health care categories, prices for dental care in September were the fastest growing at 6.0% year over year. This is an increase from a growth of 3.2% in September of 2025. At the other extreme, prescription drug prices fell by a record 4.5%—their ninth straight month of lower year-over-year prices.
- ▲ For major payers in September, year-over-year Medicare prices growth for services (3.5%) exceeded private insurance (2.7%) and Medicaid (1.5%).
- ▲ The implicit measure of health care utilization growth was 3.9% year over year in August, equaling its July value (September data are not yet available).
- ▲ Among major spending categories, home health care utilization increased the fastest, at 5.9%. Utilization of dental services declined by 0.9%.

	September 2024	September 2025	August 2026	September 2026
Health Care Price Index (HCPI)	3.3%	2.9%	2.3%	2.1%
GDP Deflator (GDPD)	2.4%	2.9%	3.7%	**
HCPI - GDPD	0.9%	0.0%	-1.4%	**
Addendum				
Personal health care spending	9.1%	7.2%	6.2%	**
Health care utilization	5.8%	4.3%	3.9%	**
Medical Consumer Price Index (MCPI)	3.3%	3.3%	1.6%	1.5%
Consumer Price Index, all items (CPI)	2.4%	3.0%	3.4%	3.7%
Producer Price Index, Final Demand (PPI)	2.1%	3.0%	5.6%	6.3%

Source: Altarum analysis of U.S. Bureau of Labor Statistics (BLS) data. HCPI is a composite price index designed to measure overall price changes for personal health care spending and is patterned after the price index developed by the Centers for Medicare & Medicaid Services (CMS). Details are provided below. Numbers may not subtract properly due to rounding. **Data not available

Altarum is a nonprofit research and consulting organization that creates and implements solutions to advance health among at-risk and disenfranchised populations. Since 2011, Altarum has researched cost growth trends and key drivers of U.S. health spending and formulated policy strategies to help bend the cost growth curve.

The *Health Sector Economic Indicators*SM (HSEI) reports are a monthly publication of Altarum providing analyses of health spending, employment, and prices. DISCUSSION

In September 2026, the overall health care price index (HCPI) stood at 2.1% year over year, down from its August value of 2.3%, and has gradually fallen from a recent high of 3.2% in November 2025 (Exhibit 1). The August HCPI was 1.4 percentage points below economy-wide inflation as measured by the GDP deflator, and has been below economy-wide inflation since November 2025. (September GDP data are not yet available.)

Regarding other measures of economy-wide inflation, the CPI increased from 3.4% in August to 3.7% in September, while the PPI grew by 6.3%, up from 5.6% in August. Economy-wide price increases were driven largely by commodities inflation, which increased to 4.6% year over year from an August value of 3.9%, and services inflation, which grew from 3.1% in August to 3.3% in September. (Exhibit 4).

Among major spending categories, dental services exhibited the fastest rise in prices in September, growing by 6.0%, year over year. Prices in most other major categories increased between 1.3% (for physician services) and 3.7% (for nursing home care) (Exhibits 2 and 3).

However, prices for prescription drugs fell by 4.5% in September, continuing a negative trend that began in January of this year. This is the largest decline in drug prices in our time series, which goes back to January 1990. In August, prescription drug prices fell by 2.9%, largely explaining the slow growth in August drug spending documented in this month’s spending brief. Both market changes (such as increased competition from generic drugs and biosimilars) and new policies (such as the Medicare drug pricing negotiation program) have [contributed to the decline](#) in drug prices.

Among major payers for health care services, prices rose fastest for Medicare patients in September, at 3.5% year over year, following a gradual increase from a negative rate of 0.6% in September 2022 (Exhibit 6). Price growth was 1.5% for Medicaid patients, dropping from a peak of 6.8% in May 2024. Price growth for private insurance patients was 2.7%. Among specific health sector components, the price growth among Medicare patients was driven by growth in hospital care prices, up 4.3% year over year. Hospital prices for private insurance grew by 4.0%, while Medicaid was up by 0.9% (Exhibit 8). Growth in prices for physician services was moderate for all three payers, all below 2.0%, with Medicaid prices flat 0.0% (Exhibit 7).

Exhibit 2. Year-over-Year Price Growth for Selected Categories

Exhibit 1. Year-over-Year Growth in HCPI & GDPD

Source: Altarum analysis of monthly BLS price data.

Our implicit measure of overall health care utilization growth (total spending growth net of health care price inflation, year over year) was 3.9% in August 2026 (Exhibit 9). (September data are not yet available.) Among major categories, the fastest-growing utilization component was home health care, which increased by 5.9%, followed by hospital care, up 4.9% year over year. At the other extreme, utilization of dental services declined by 0.9%.

Exhibit 3. Annualized % Change in Prices for Major Components of National Health Expenditures

Exhibit 4. Year-over-Year Percentage Change in Health Prices Compared with Economy-wide Commodities vs. Economy-wide Services

Methods. Altarum's estimates for the monthly HCPI, a price index for personal health care spending within the National Health Expenditure Accounts, are essentially monthly versions of the annual index developed by the CMS National Health Statistics Group (NHS). The advantages of this measure over the medical care component of the CPI are well documented. Information on the CMS index is presented in the following source: U.S. Department of Health and Human Services. (2019). *National Health Expenditure Accounts: Methodology Paper, 2018—Definitions, Sources, and Methods*. Washington, DC: Centers for Medicare & Medicaid Services. Retrieved from <http://www.cms.gov/files/document/definitions-sources-and-methods.pdf>. The HCPI is calculated by using BLS data on PPIs for hospital, physician, nursing home, and home health components and CPIs for prescription drugs and other remaining items. Following NHS, we use the GDPD rather than the CPI as our measure of economy-wide inflation. While this brief focuses on prices, it also incorporates data from our spending brief and shows the power of looking at prices and spending together. In particular, it reveals the striking role of utilization in health spending growth trends.

TIME SERIES TRACKER

Exhibit 9. Implicit Health Care Utilization Growth by Major Components of NHE, Year-over-year

	August 2026	3-Month Moving Average	12-Month Moving Average
Total personal health care	3.9%	4.0%	4.0%
Hospital care	4.9%	5.0%	4.2%
Physician and clinical services	4.0%	4.5%	4.6%
Prescription drugs	4.3%	4.3%	4.7%
Nursing home care	3.0%	2.9%	3.3%
Dental Services	-0.9%	-1.8%	2.1%
Home health care	5.9%	7.3%	9.4%
Other professional services	3.4%	3.4%	3.7%
Other personal health care	1.8%	0.9%	1.2%
Other nondurable medical products	7.4%	6.8%	5.8%
Durable medical equipment	8.0%	6.2%	3.0%

Source: Altarum analysis of monthly BLS data combined with Altarum HSEI spending data. Utilization growth (U) is computed as spending growth (S) net of price growth (P): $U = S - P$. This approach is an approximation, ignoring the interaction term between spending and prices growth ($S \cdot P$); however, as long as the two growth rates are small, this term is insignificant.
