GDP growth continues to outpace health spending growth, but they have begun to converge in June 2026

HIGHLIGHTS

- ▲ In June 2026, national health spending grew by 5.8% year over year, down from the May 2026 growth rate of 6.1% and significantly lower than its June 2025 rate of 7.1%.
- ▲ GDP grew by 6.1% in June, year over year, lower than its revised May value of 6.8%. As a result, national health spending in June equaled the 18.3% of GDP seen in May. National health spending was last below 18% of GDP in July 2024.
- ▲ Year-over-year growth in personal health care spending was 5.5% in June, year over year, down from 7.5% in June 2025.
- ▲ Growth among major spending categories was highest for dental services, at 8.2%, year over year, while spending for prescription drugs grew the slowest, at 1.9%. Drug spending growth has slowed significantly this year; it stood at 8.6% in June 2025.

National Health Spending and GDP*

	June 2024	June 2025	May 2026	June 2026
GDP	29.24	30.73	32.42	32.59
National Health Spending (HS)	5.25	5.62	5.92	5.95
HS Share of GDP	18.0%	18.3%	18.3%	18.3%
HS Share of PGDP	18.2%	18.5%	18.4%	18.4%
Growth from Prior 12 Months				
HS	7.2%	7.1%	6.1%	5.8%
GDP	5.7%	5.1%	6.8%	6.1%
HS minus GDP	1.6%	2.0%	-0.7%	-0.2%
HS minus PGDP	1.9%	1.9%	-0.7%	-0.6%

DISCUSSION

In June 2026, national health spending reached a seasonally adjusted annual rate of \$5.95 trillion, up from the revised May level of \$5.92 trillion. June's spending corresponds to a year-over-year growth rate of 5.8%.

Year-over-year GDP growth was 6.1% in June, and national health spending in June grew 0.2 percentage points slower than GDP. National health spending in June represented 18.3% of GDP. In the past few months, an increasing growth rate in GDP and a decline in the growth rate of health spending resulted in GDP growth exceeding health spending growth beginning in March 2026 for the first time in more than two years. However, those rates began to converge in June.

The year-over-year growth rate in personal health care spending was 5.5% in June and also fell below the GDP growth rate beginning in March. (See Exhibit 1.)

Exhibit 1. Year-over-Year Growth in GDP and Health Spending

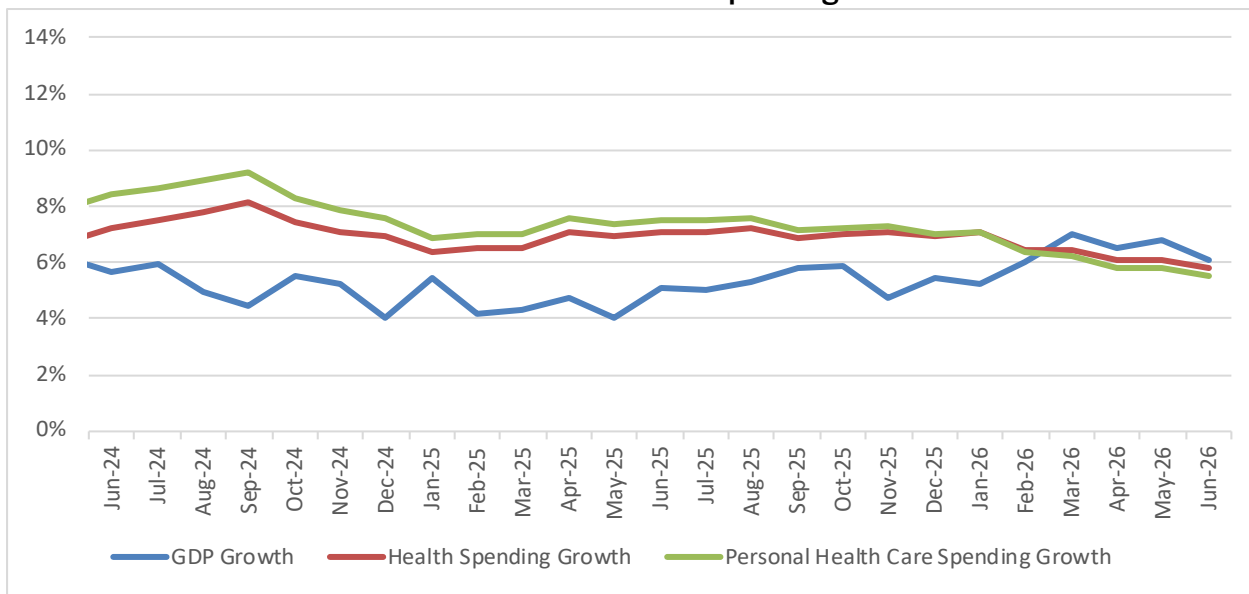

Exhibit 2 illustrates how health spending in June was distributed among spending categories. Personal health care constituted 85.5% of national health spending. Slightly more than half of total expenditures was attributed to hospital care and physician and clinical services.

Exhibit 2. Health Spending by Category, June 2026

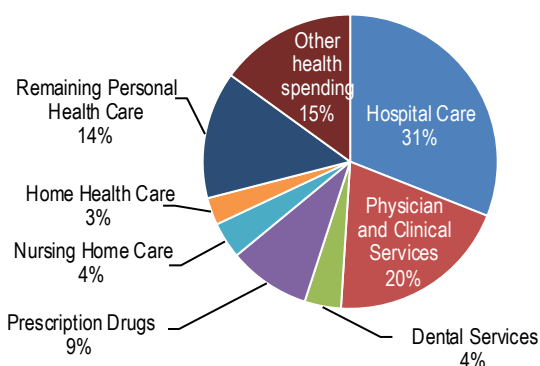

Exhibit 3 displays the growth in spending for personal health care and its major component categories for the 12-month periods ending June 2026 and June 2025. Spending on all categories except dental services showed slower growth this year compared with last. Annual growth in June 2026 was greatest for dental services, at 8.2%. The slowest growth occurred in spending on prescription drugs, at 1.9%.

Exhibit 3. Health Care Spending 12-Month Growth

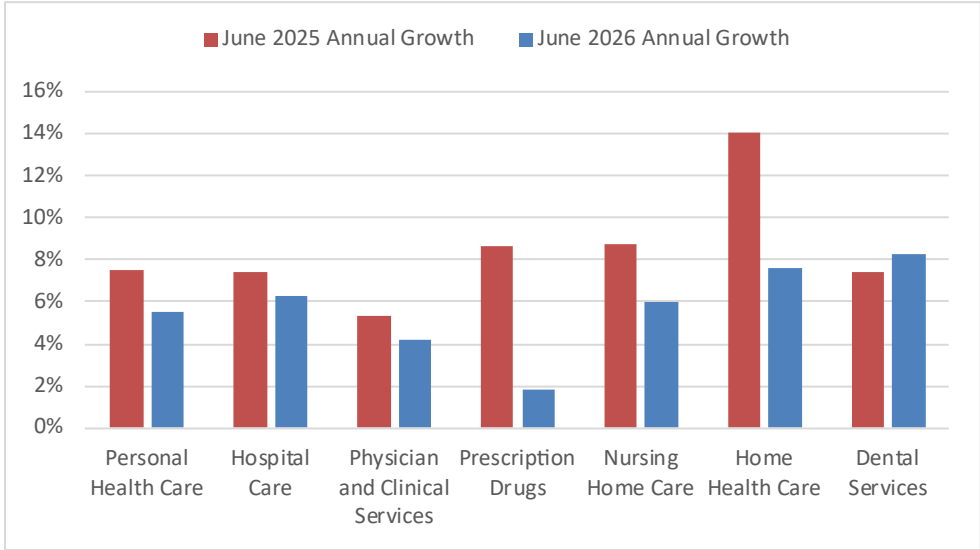

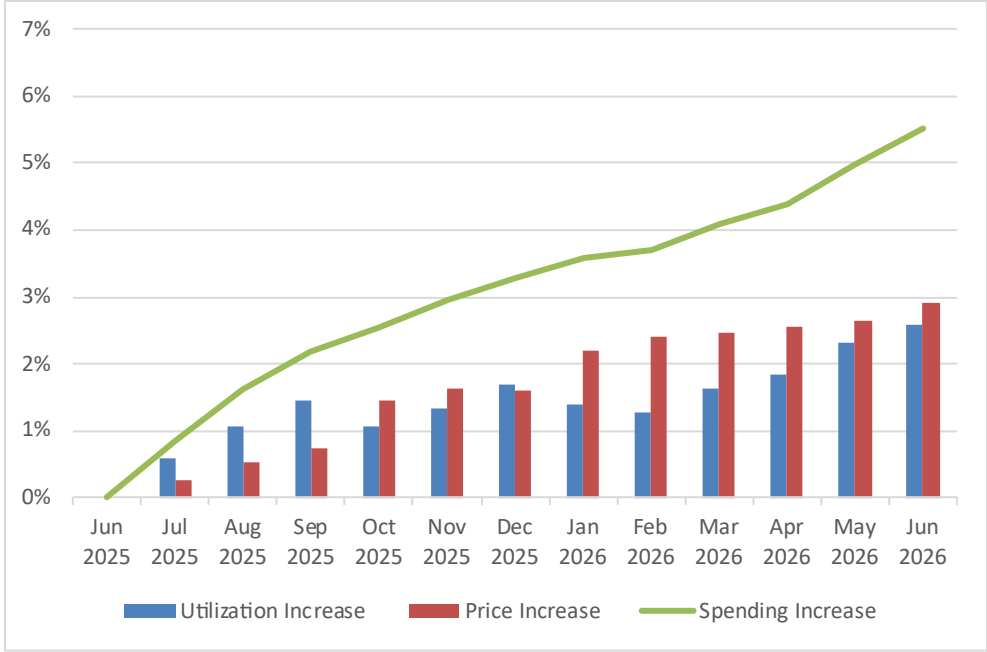

Exhibit 4 shows how spending on personal health care has grown over the past year (beginning in June 2025) and illustrates the relative contribution of utilization and prices to this growth. It indicates that price increases have contributed slightly more than utilization growth through June 2026, with price increases dominating utilization growth since the start of the calendar year. Of the 5.5% growth in personal health care spending during this period, 2.9 percentage points can be attributed to price growth, while the remaining 2.6 percentage point growth was associated with increases in utilization.

Exhibit 8 Monthly Health Spending as a Percentage of Monthly GDP

Source: Altarum monthly national health spending estimates. Monthly GDP is from S&P Global Market Intelligence. PGDP is from the U.S. Congressional Budget Office and has been converted to monthly estimates. **Note:** Lightly shaded bars denote recession periods.

Methods. Altarum's estimates are based on [BEA monthly health spending](#) and [CMS annual NHE estimates \(1990–2024\) and projections \(2025–2026\)](#). BEA spending categories are matched to NHEA components by using information presented in the [following](#): Hartman, M. B., Kornfeld, R. J., & Catlin, A. C. (2010, September). A reconciliation of health care expenditures in the National Health Expenditures Accounts and in gross domestic product. *Survey of Current Business*, 90(9), 42–52. For all NHEA personal health care categories except “other health, residential, and personal care,” monthly estimates are based on BEA spending adjusted to NHEA by using annual ratios. For the remaining categories, national health spending estimates and projections are allocated across months by using a simple trend. Annual ratio adjustments through 2024 are based on NHEA actuals and ensure that monthly estimates sum exactly to NHEA annual amounts. The 2024 ratios are used to adjust BEA spending for months in 2025 and 2026.
